# Objective

Create a visually engaging sustainability “report card” that identifies the increase or decrease in CO<sub>2</sub> emissions from California government agencies since 2010.

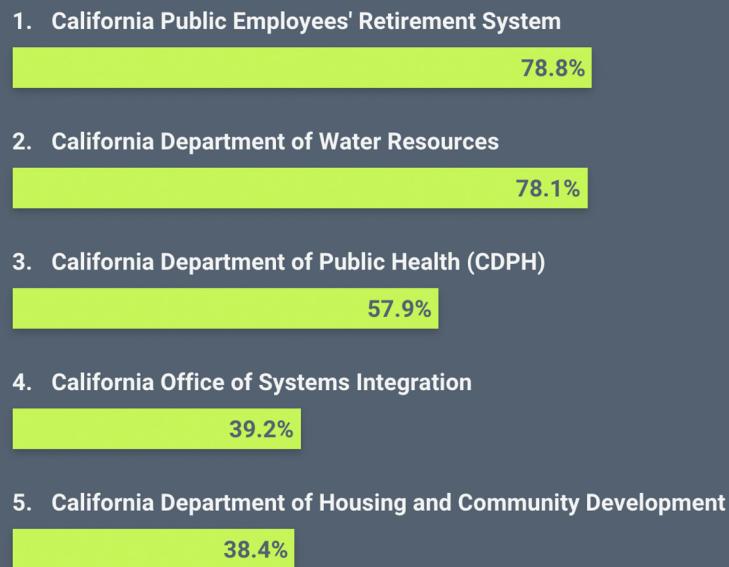

The “report card” pulls State Agency CO<sub>2</sub>e data and compares it against executive order B-18-12.

# Approach

---

We display live data as easily consumed percentages with simple language that implies a call to action.

## THE BEST

## THE WORST

# Features

---

Users can quickly scan the most and least successful agencies as well as drill down to a graphical, detail view of any agency.

# What next?

---

Our “report card” could be expanded by better support for smaller screen devices, a view targeting a kiosk-style screens with realtime updates, and additional infographics that give context to the data.
